Madrid, Spain

Full Stack Developer with solid experience in internal system development, business process automation, system deployment, and microservices development. Specialized in JavaScript, TypeScript, React, Node.js, and MongoDB, with knowledge of Docker, networking, and local infrastructure configuration. Able to design scalable end-to-end solutions, working both independently and collaboratively.

PROFESSIONAL SUMMARY

Full Stack Developer

Grupo Hereda — Nov 2023 - Present

I led the development of internal scrapers and dashboards that streamlined administrative tasks and reduced manual work. I implemented local infrastructure for LLM models and improved traceability with OAuth2 authentication.

- Automated internal processes using Google services and integrated APIs to support CRM migration.
- Migrated and maintained legacy CRM systems.
- Integrated external APIs for enterprise data synchronization.
- Developed custom solutions using Google services for internal workflows.
- Provided support for network and systems infrastructure, ensuring continuous operation of internal services.

Full Stack Developer

Tolentino Abogados — Dec 2022 - Nov 2023

I developed a quality control system that automated key office tasks, improving operational efficiency. I led the configuration and implementation of the infrastructure.

- Development of a quality control system and automation of law firm tasks.
- Collaborative work in an agile team using Scrum for the development of backend and frontend functionalities.
- Participation in the acquisition, configuration, and administration of physical servers.
- Design and maintenance of technical infrastructure and internal management software.

Backend Developer

Grupo Hereda — May 2022 - Dec 2022

I automated internal processes using Google services and integrated APIs that facilitated CRM migration.

- Migration and maintenance of legacy CRM systems.
- Integration of external APIs for business data synchronization.
- Development of customized solutions with Google services for internal workflows.
- Support for network and systems infrastructure, ensuring the continuous operation of internal services.
